- 8 baffles per module
- Available in 28 colours, available from stock
- Made from recycled plastic bottles
- Excellent acoustic properties
- Prices are exclusive of VAT

ACOUSTIC BAFFLES PET WAVE

Feltup Acoustic Baffles Wave offer a complete solution for acoustic ceiling systems. The cheerful waves almost give you the impression that you are underwater. The Acoustic Baffles absorb the sound and thus counteract reverberation.

PET FELT

PET Felt is made from recycled plastic bottles. A fiber is made from the finely ground bottles and this creates a soft, but sturdy felt. It lasts a long time, is easy to maintain and dampens noise. PET Felt can also be recycled. The PET Felt is available in 4 colours and fits into any interior.

COLOURS

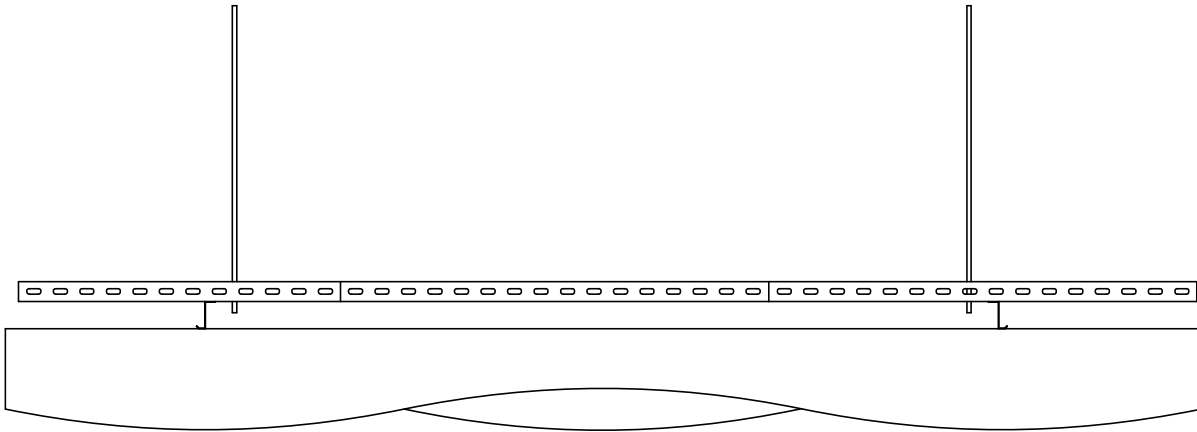

Slight colour deviations can occur since the PET Felt panels are made from recycled fibers. The panels have a frontside and a backside because the fibers are differently orientated on both sides, the nap direction. Keep in mind to apply the panels in the same direction and use the same side during the installation to avoid alterations in appearance.

It's Noisy Out There

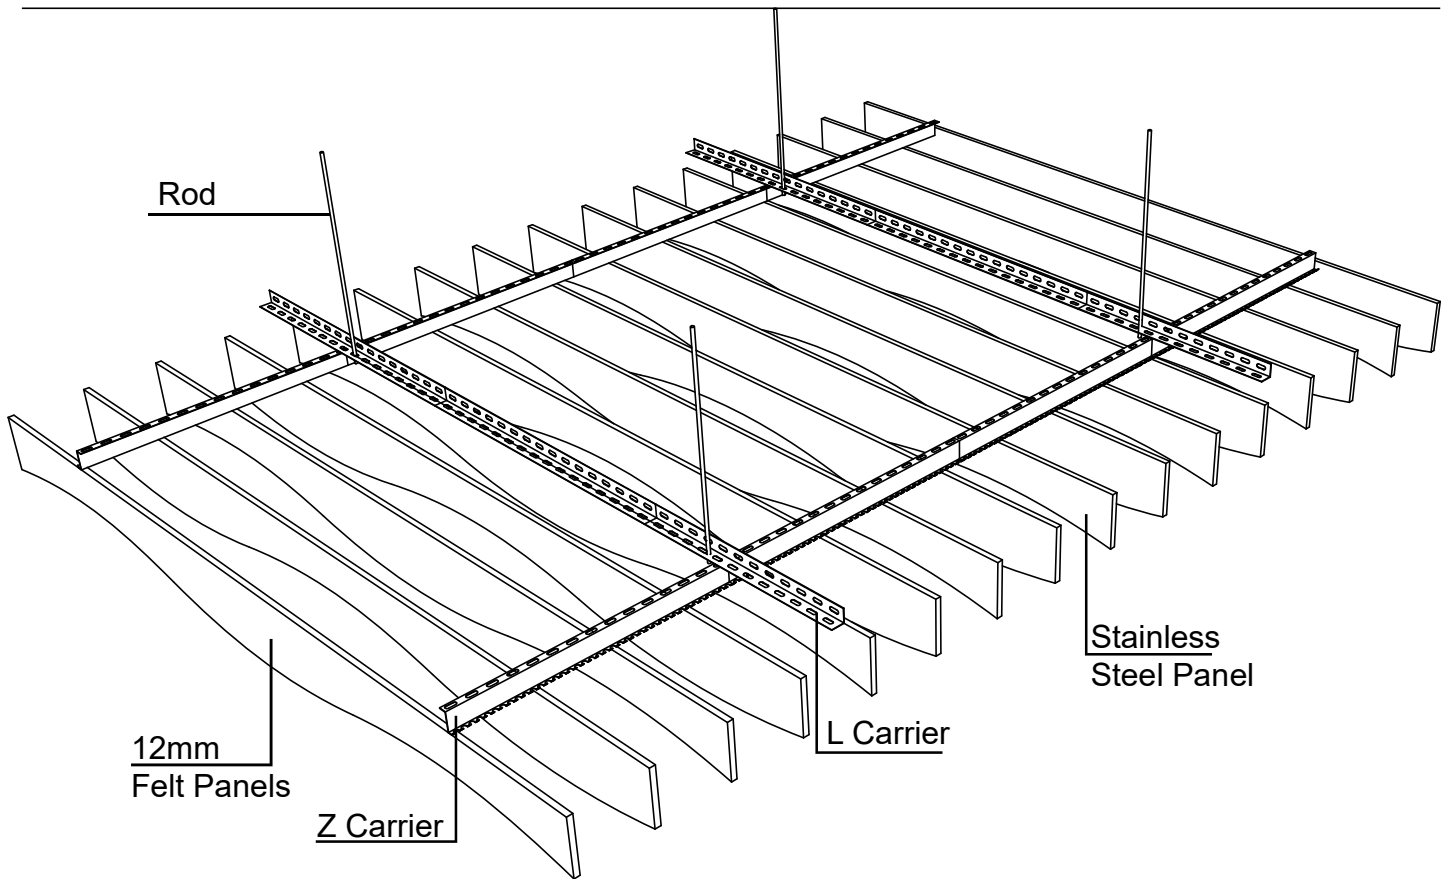

Sound Masking Systems

With so many acoustical options available in the marketplace, it is important to choose a company who can focus on both proper design and performance. Our acoustic experts take a design-oriented approach. We offer 100% free sound masking system design layouts fit specifically to the space.

Feltup also can provide acoustic calculations and renderings to show placement and design of acoustic material. Whatever your need, MPS can help with a comprehensive solution to fit any space. Designed for functional beauty. Designed for performance.

Front

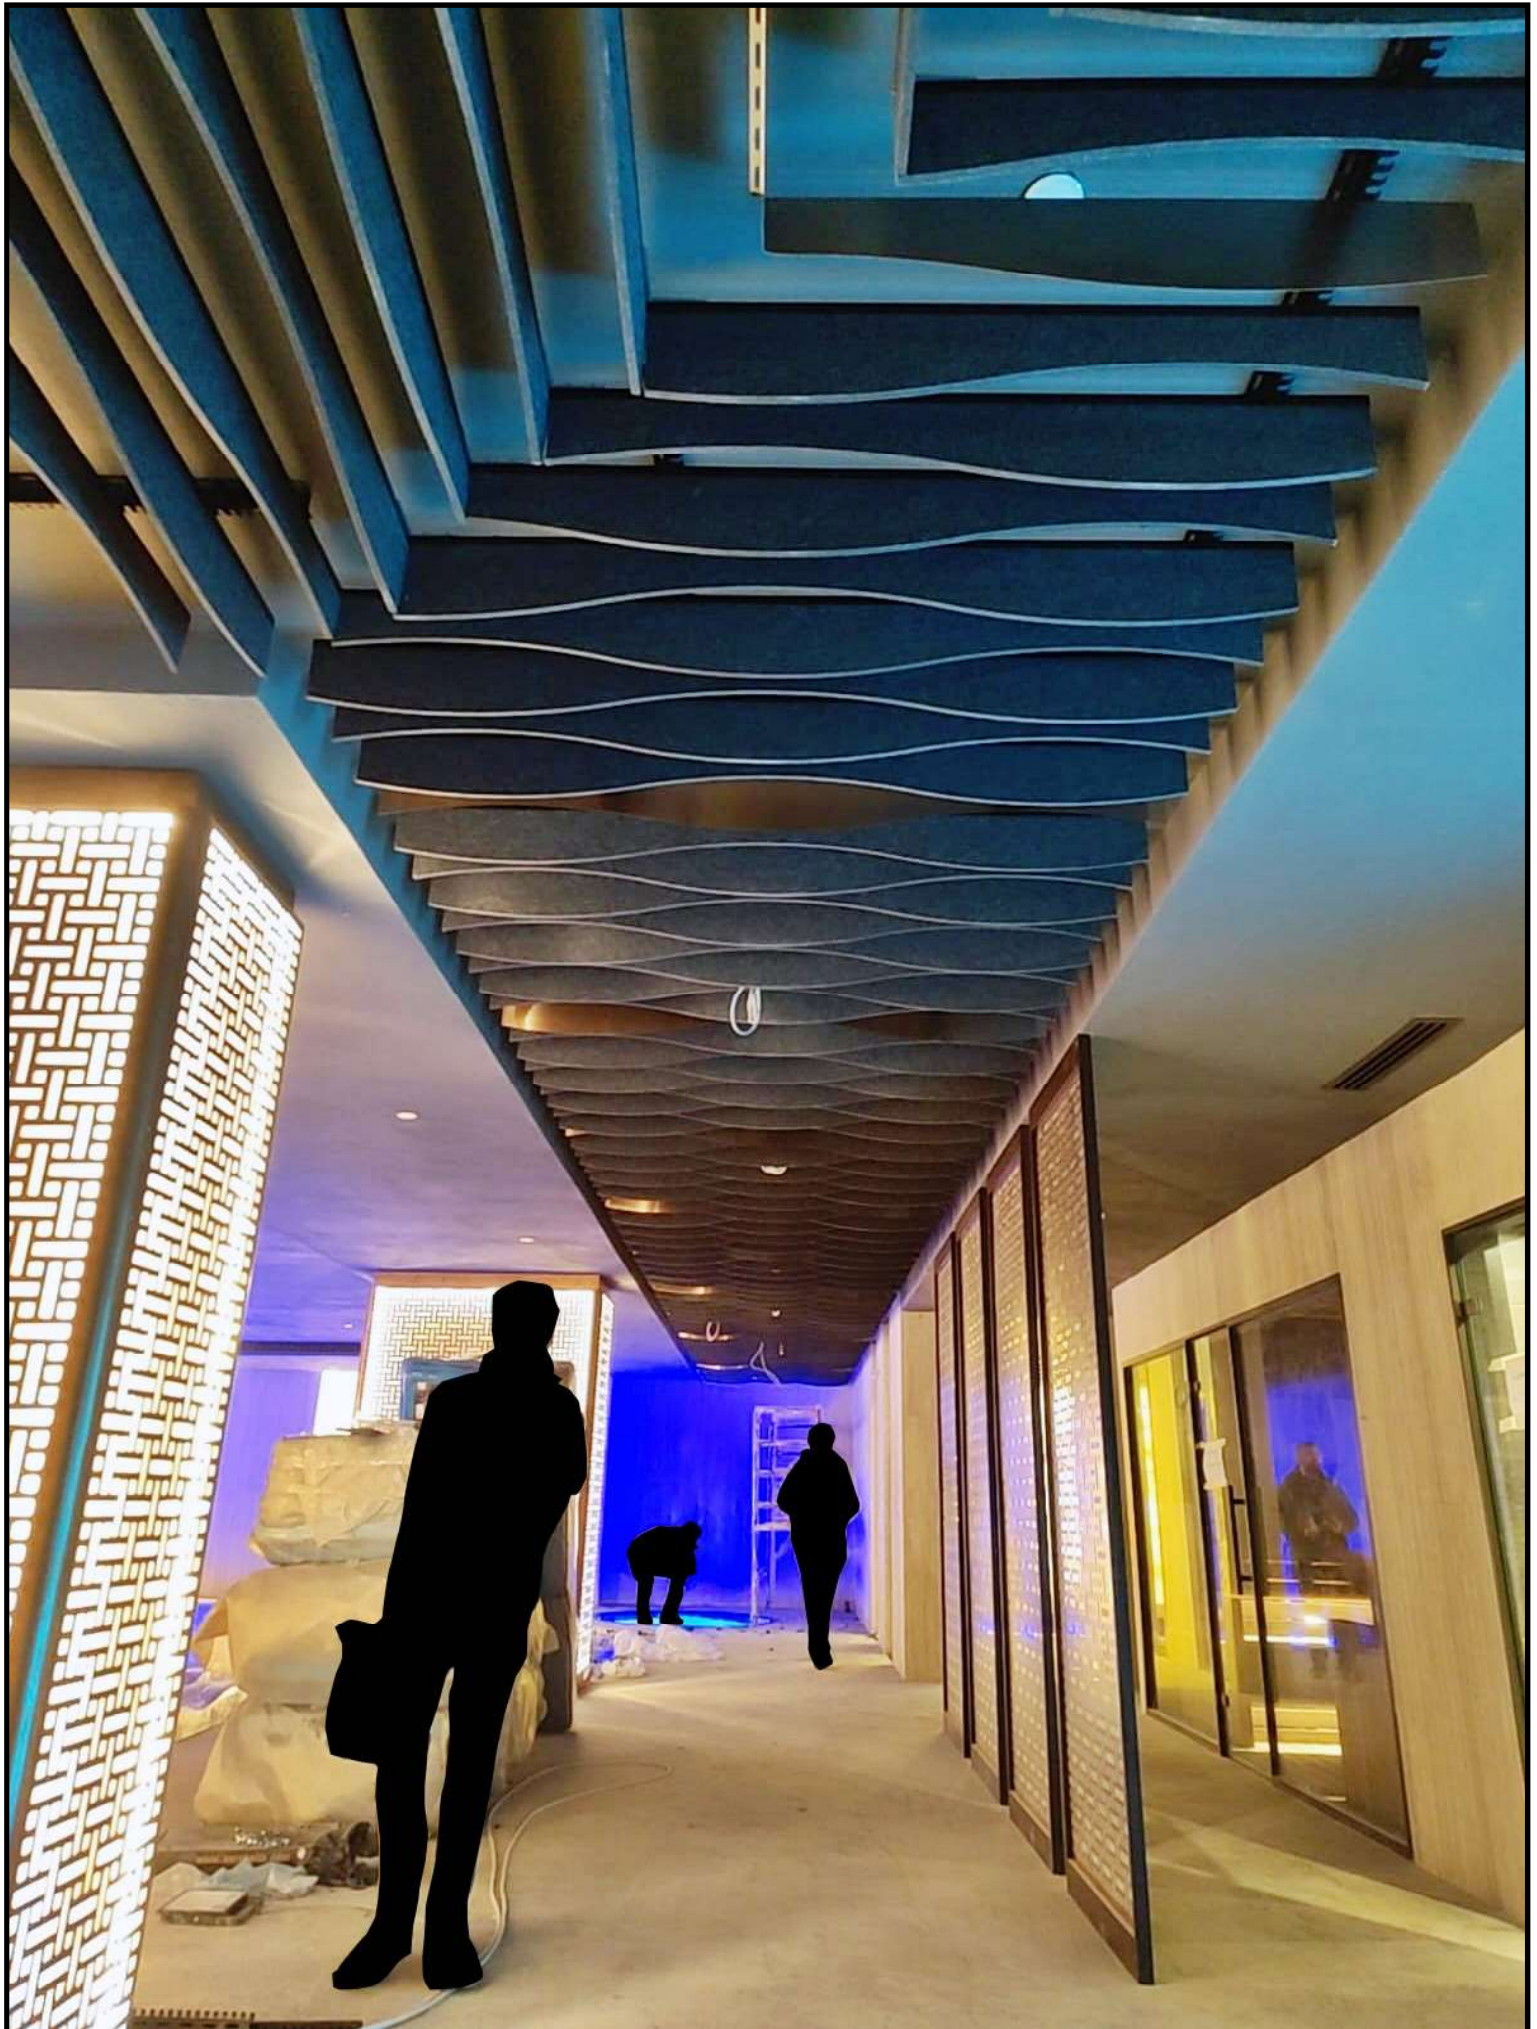

Perspective

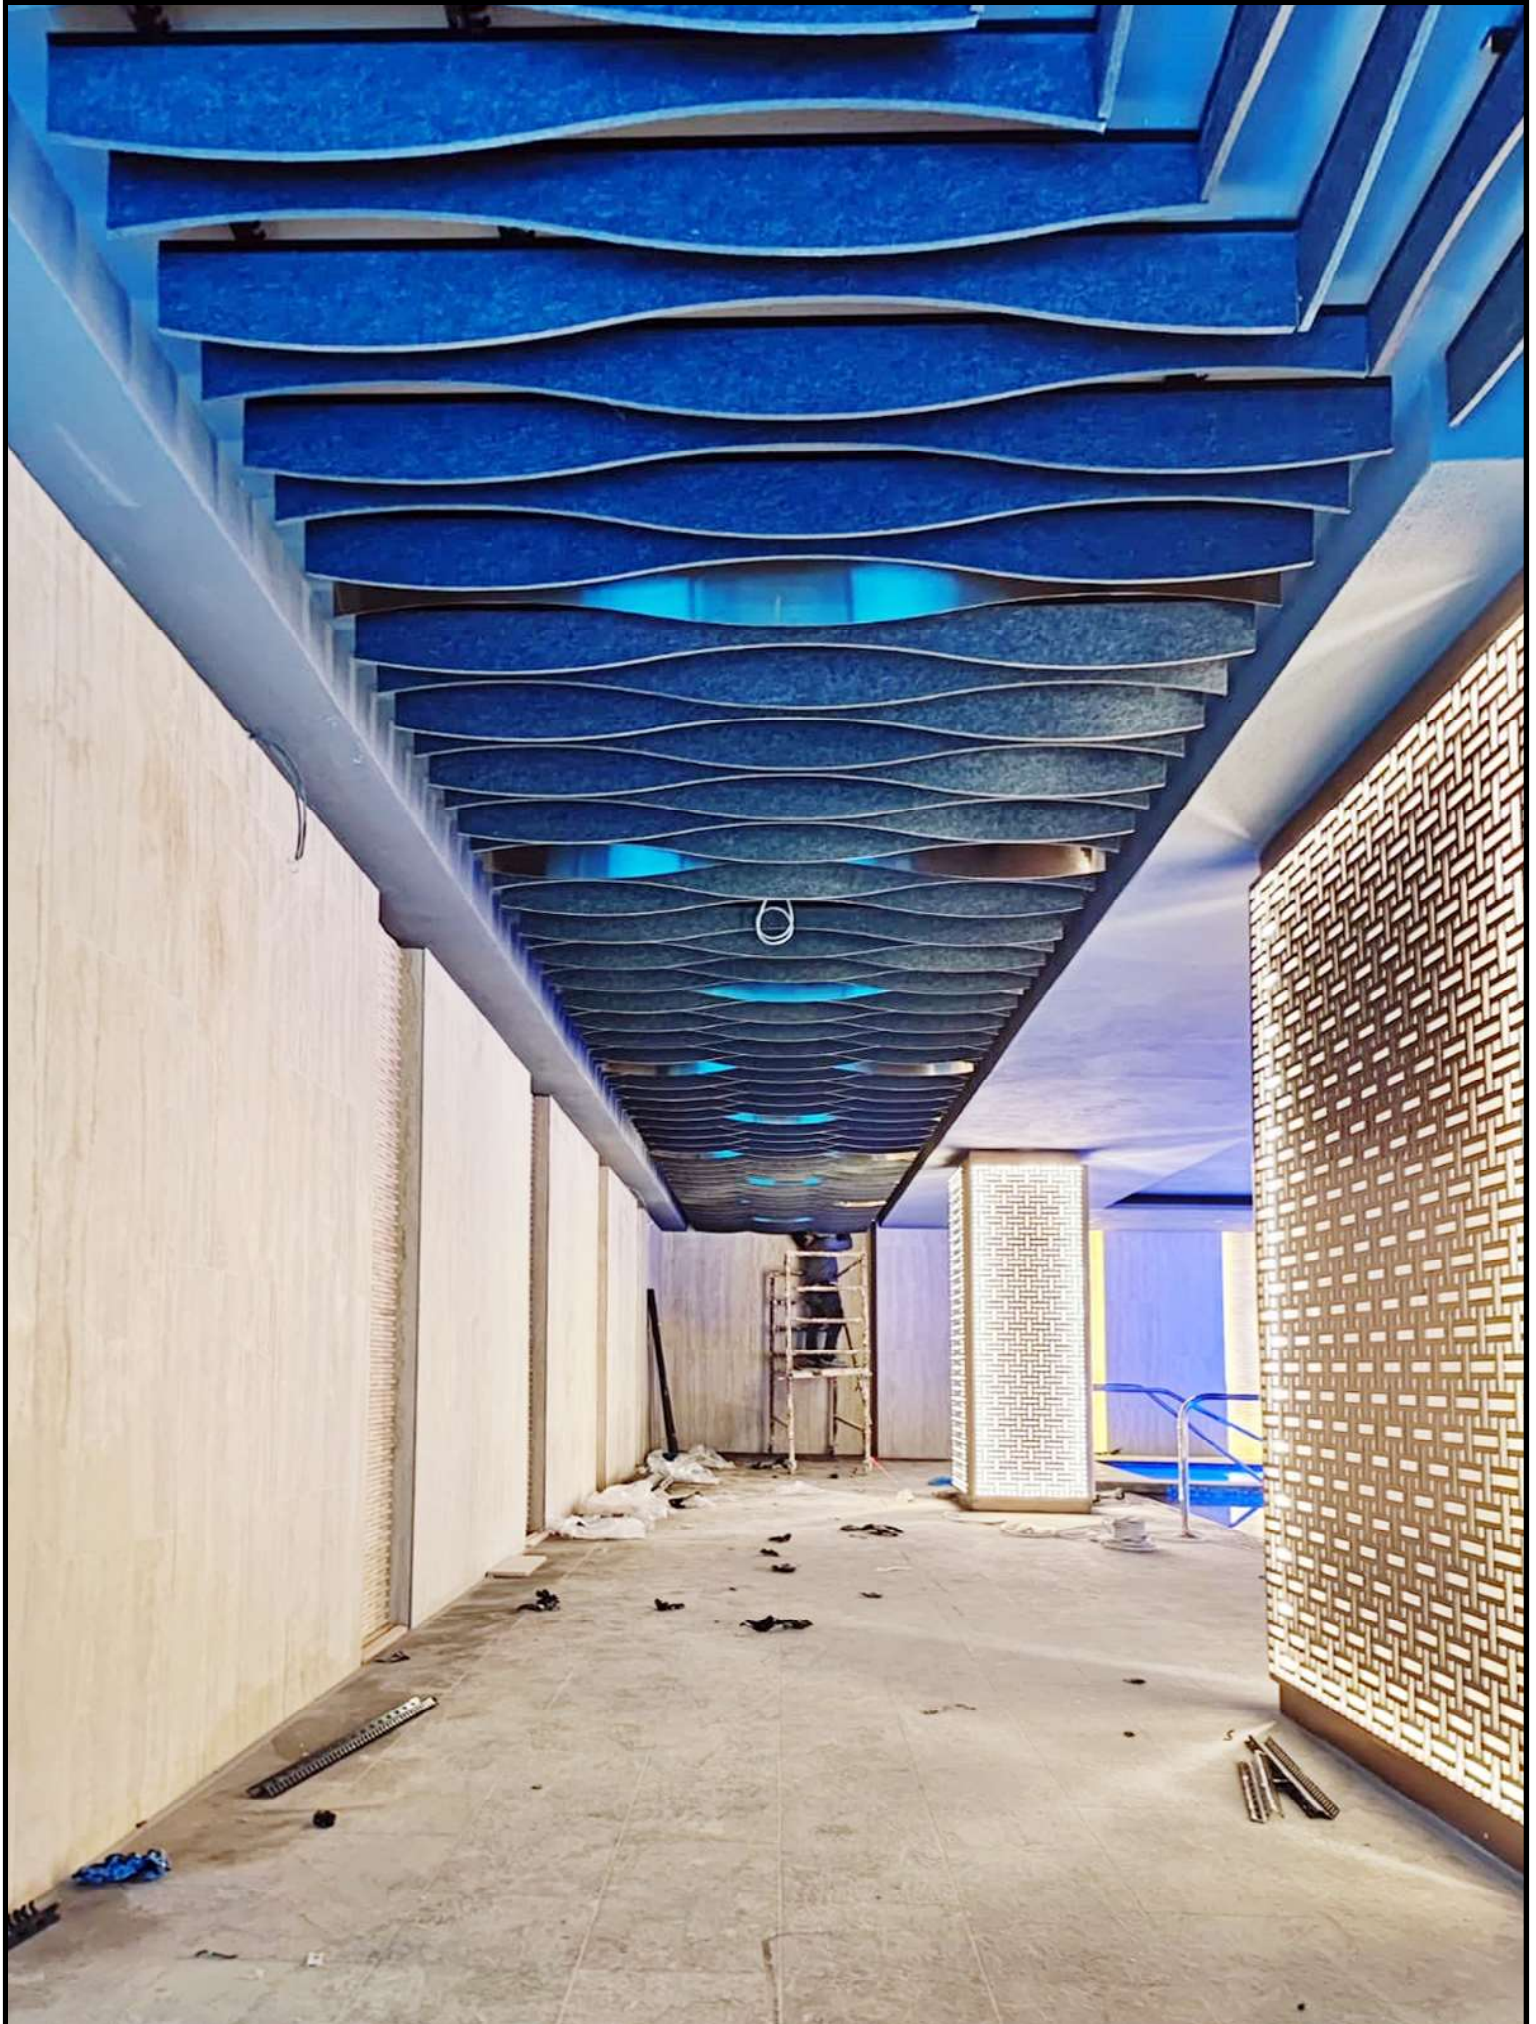

Feltup is an acoustic ceiling baffle designed to mimic the natural aesthetic of a real wood beam, without the associated weight and sound reverberation of natural wood. The strategic horizontal suspension and configuration of baffles can be used as a versatile way to absorb sound in a space.

Design-oriented acoustic solutions by Feltup can reshape and bring any type of workspace to life. From ceiling baffles to wall panels, and tiles to custom projects, acoustic felt adds dimension and functional beauty to a wide range of spaces.

Each of the dozens of custom and standard shapes and designs of Feltup acoustic panels dampen and diffuse mid-to high-frequency sound waves, which reduces distracting noise, echo and reverb, and enhances acoustic privacy.

Feltup Acoustic panels provide a thoughtful design style, with color options and versatility, for the acoustic enhancement and visual separation of any space.
